

securKEY Document Security

%100 Document Security

🔒 Encrypt Your Documents, Photos, Musics, Videos, Projects, etc.

🔒 Protect Your Cloud Account Files

🔒 You Don't Need to Install Driver For securKEY

🔒 256 Bit AES Encryption

Microprocessor Based Protection

Developed Rados Data Flow System

Unique Algorithm

Easy Connection with USB Interface

Driver Free Installation

Self Lock When Abnormal Communication Detected

2 Factor Security : Pin Code - Usb Device

securKEY Document Security

SecurKEY is a document encrypting device. Documents in digital environment are protected securely via securKEY. Protected documents are only accessible as long as securKEY is attached to computer. In any digital environment, it is not possible to access the protected documents if securKEY is not attached. Thus, unauthorized persons cannot reach the content of the protected documents.

SecurKEY provides the facility to encrypt files, documents, videos or projects. SecurKEY is a small device which is attached to computer via USB port and developed for digital security purposes. So data and document storage is securely done in the absence of the risk of being captured.

Documents which are protected via securKEY can be stored and used in local disk, network share, external storage devices or cloud environment. SecurKEY is not a flash disk, so it does not have a storage function.

Size and the type of the documents do not matter to be protected via securKEY.

Your security is provided by two factors; something you know (the password) and something you own (the device).
